ACI CERTIFICATION

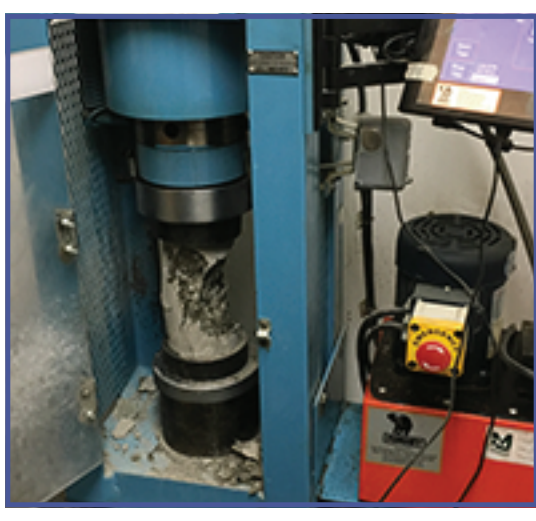
ACI's certification programs provide you with the credentials to build the best concrete structures in the world.

With nearly 20,000 members in over 100 countries, ACI truly is an international society that provides information on engineering and construction practices worldwide.

ACI offers over 20 certification programs designed to form a minimum qualification for personnel employed within the concrete construction industry.

Ensuring our team members are certified gives us a leading edge against the competition as our team is qualified for more jobs, and we produce the best work again and again, earning a solid reputation.

A **CSA-Based Concrete Field Testing Technician - Grade I** is an individual who has demonstrated the knowledge and ability to properly perform and record the results of seven basic field test methods and standard practices on freshly-mixed concrete as prescribed by Canadian Standards Association methods.



Engineers will find ACI educational offerings very useful for learning about code and specification developments, learning about emerging technologies, and staying current with professional development requirements.
